NEXT FARMING OFFICE - FARM INFORMATION MANAGEMENT SYSTEM

Our NEXT Farming – Smart Integrated Solutions program provides all the necessary, spatially explicit information about field site-specific conditions for site-specific farm management. Data based decisions and precise recommendations on application of inputs based on real-time field conditions are made possible with NEXT Farming Office FIMS.

COMPREHENSIVE PACKAGE

Optimize your farm management towards maximizing your production in the most cost effective and sustainable way.

Features of NEXT Farming Office FIMS:

- ✓ Saving Documentation of master data & site-specific management
- ✓ Downstream analysis of NEXT Farming Talking Fields Base Maps
- ✓ Processing GPS-based soil sample results
- ✓ Create variable rate prescription maps & transfer to machine
- ✓ Ultimate connectivity to all brands of equipment that are ISOBUS ready
- ✓ Perform stock management, nutrient & humus accounting
- ✓ Costs, revenues and contribution margin per farm or fields automatically documented
- ✓ Download reports via I-Phone through NEXT Mobile Apps

DATA BASED DECISIONS AND PRECISE RECOMMENDATIONS ON APPLICATION OF INPUTS

The NEXT Farming Office - Farm Information Management System (FIMS) software packages create field documentation, fertilizer planning and site-specific analysis. Costs, revenues and contribution margin per farm or fields are automatically documented for generation of reports that can be exported or downloaded via I-Phone through NEXT Mobile Apps.

The program further offers ultimate connectivity to all brands of equipment that are ISOBUS ready. The use of exact graphical representation for the geo-referenced yield maps, sensor data, or soil sample analysis and creating of own application maps are made possible with our NEXT Farming Office Farm Information Management System.
